

Professional Home Pub Bar Darts Mat are used to protect your floor and ensure that you are always at the right distance. Nevertheless, not every dart can pierce exactly where you want it. Especially at the beginning, the error rate is still relatively high, so you will definitely throw one or two arrows next to the board. In most cases, you can protect your wall with a catch ring, but your floor is not spared if the arrows bounce off the dart board.

Such rebounds happen not only to beginners but also to the pro players in the world. When an arrow hits another that is already on the board, it regularly happens that the arrow "bounced" from the target. It is always a problem when you with steel darts throw on a classic dartboard from sisal and the arrow bounced. The steel tip drills deep into the wooden floor or provides a chip on the stone tile. The problem can be avoided with a dart mat or carpet. For this reason, you will find the best dart mats in this article that will protect your floor and have other advantages. Below is all the information for choosing Professional Home Pub Bar Darts Mat.
